Spies et al. 2018

# Historical Fire Regimes

Adapted from Agee 1998

# Historical Fire Regimes

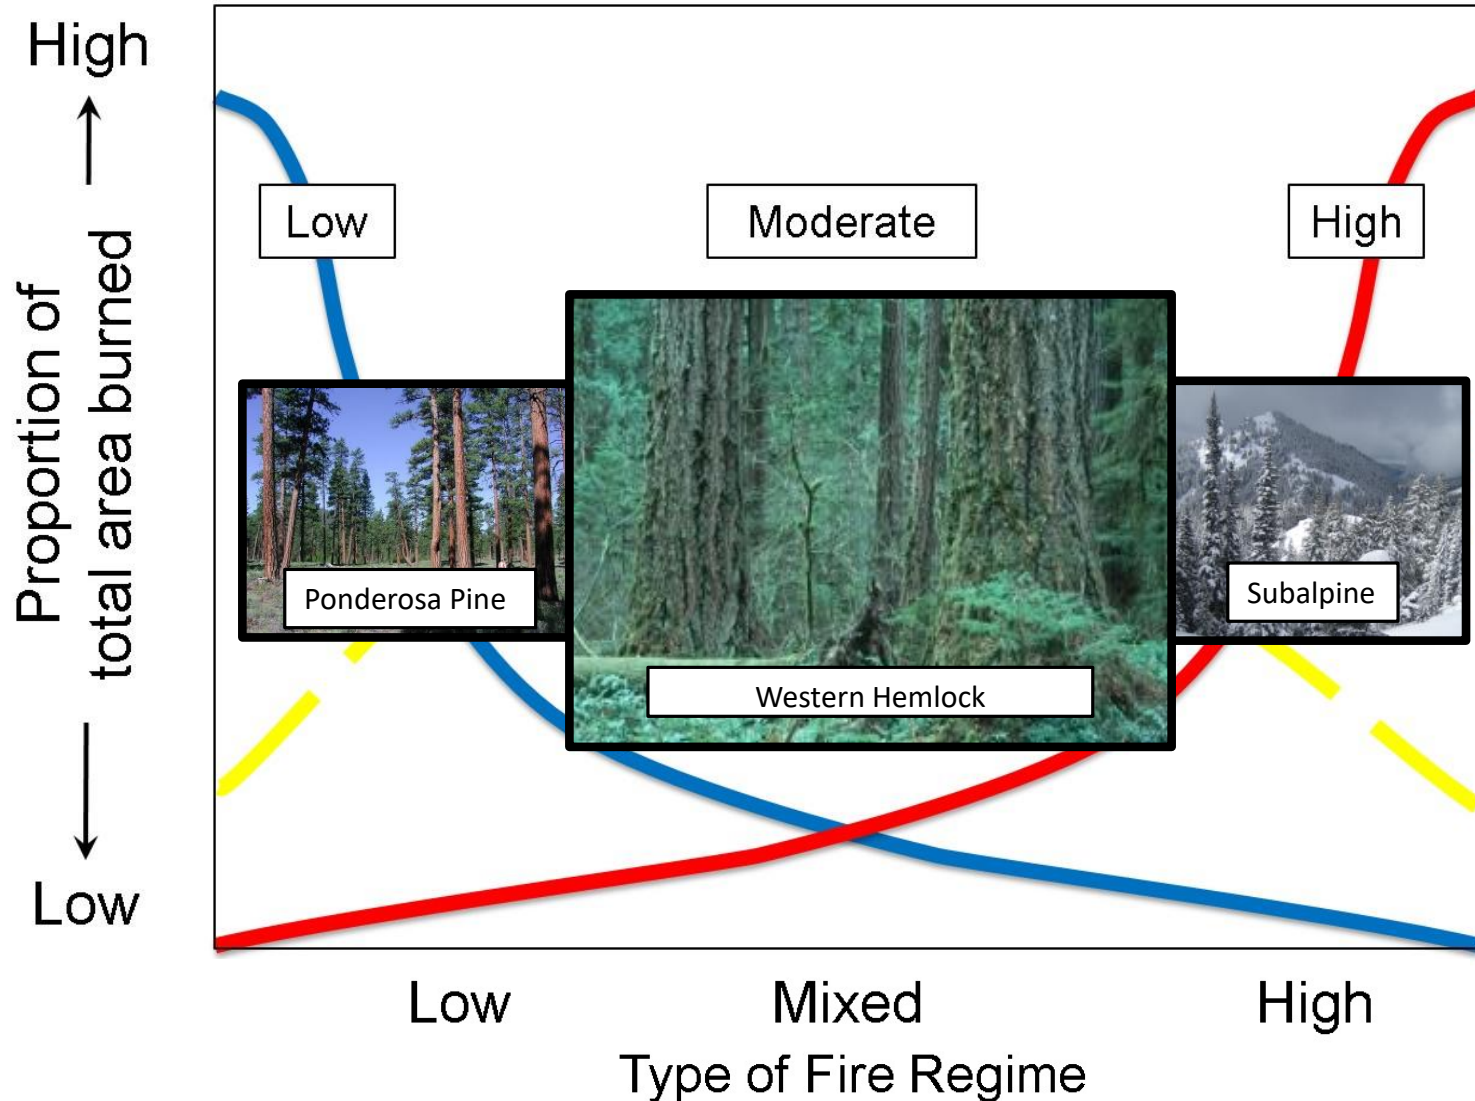

# Historical Fire Regimes

Adapted from Agee 1998

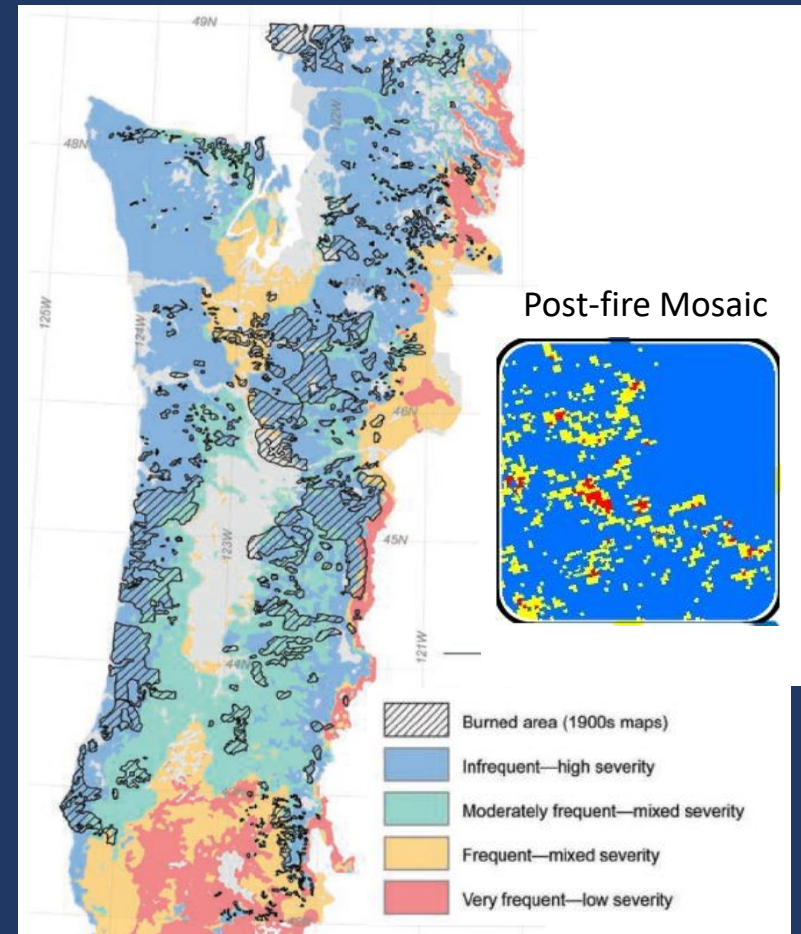

# Historical Fire Regimes

Adapted from Agee 1998

# Frequent, Low Severity

- More typical of the dry forest east of the Cascades but characteristic of low elevation oak woodlands
- Numerous fire scar studies
- Conditions for burning are common, but fuels usually limit fire behavior and effects

# Frequent, Low Severity

- More typical of the dry forest east of the Cascades but characteristic of low elevation oak woodlands
- Numerous fire scar studies from ponderosa pine
- Conditions for burning are common, but fuels usually limit fire behavior and effects

Illustration by Bob Van Pelt

# Frequent, Low Severity

- Long period of fire exclusion
- Increased density and changes in composition
- Increased potential for uncharacteristic fire behavior and effects
- Loss of old legacy trees

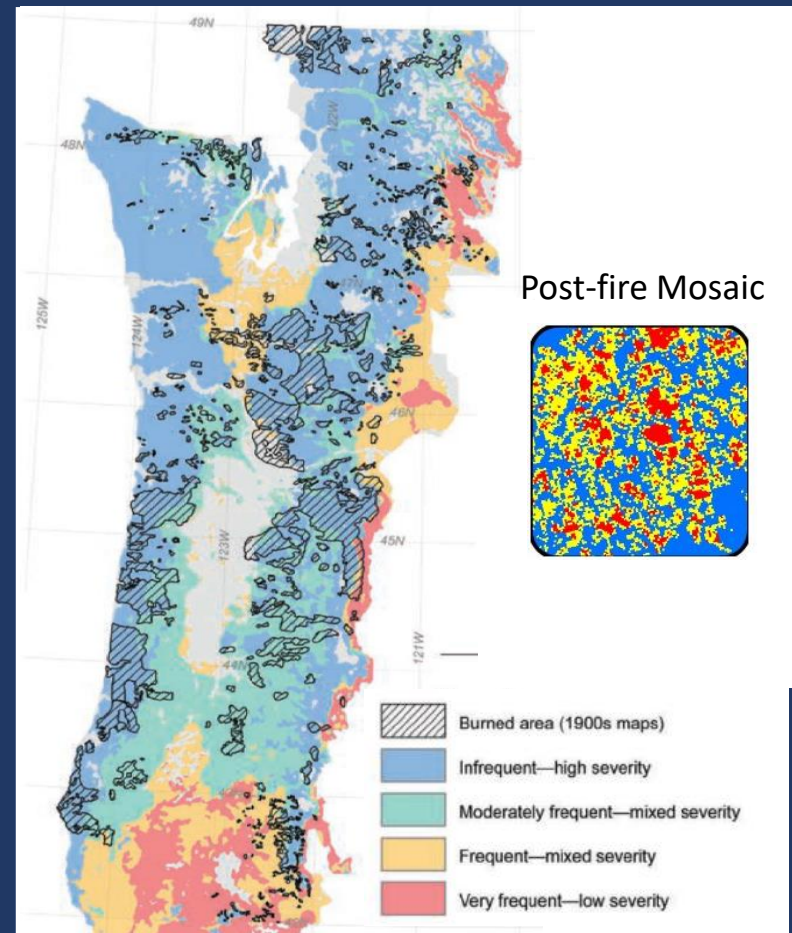

Illustration by Bob Van Pelt

# Mixed Severity

- Increases in importance towards the south where ignitions and summer drought become more prominent
- Limited number of fire scar studies
- More complex and less well understood

# Mixed Severity

- Increases in importance towards the south where ignitions and summer drought become more prominent and productivity is relatively high
- Limited number of fire scar studies
- More complex and less well understood

Figure 3-16—Mosaic of fire severity patches in a Douglas-fir and western hemlock landscape in the western Cascade Range of Oregon. Black = a high mortality area (>70 percent), vertical lines = moderate mortality (30 to 70 percent), and stippled = low mortality areas (<30 percent). From Morrison and Swanson 1991.

THE UNIVERSITY OF CHICAGO

# Fine and Coarse Scale Mosaic

- Strong “bottom-up” controls on fire behavior and severity
- Forest structure and topography are important
- Occasional large patches of high severity-fire in weather driven fires

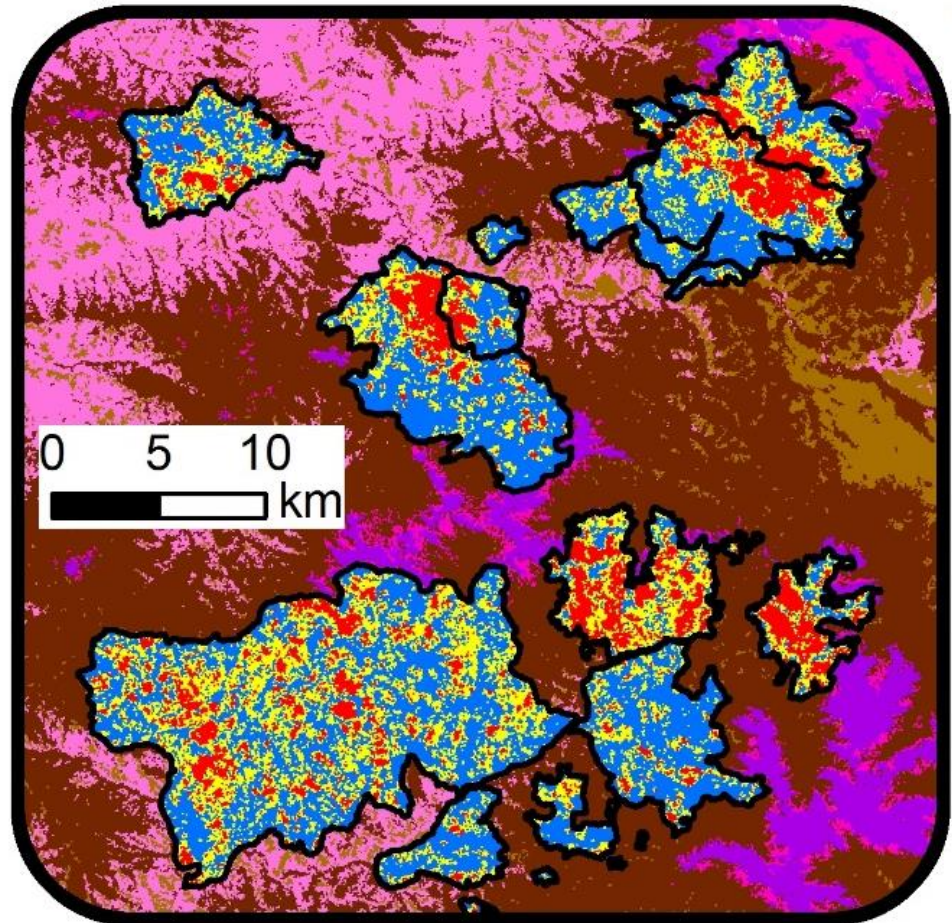

# Fine and Coarse Scale Mosaic

## Fire Severity

## Vegetation Zone

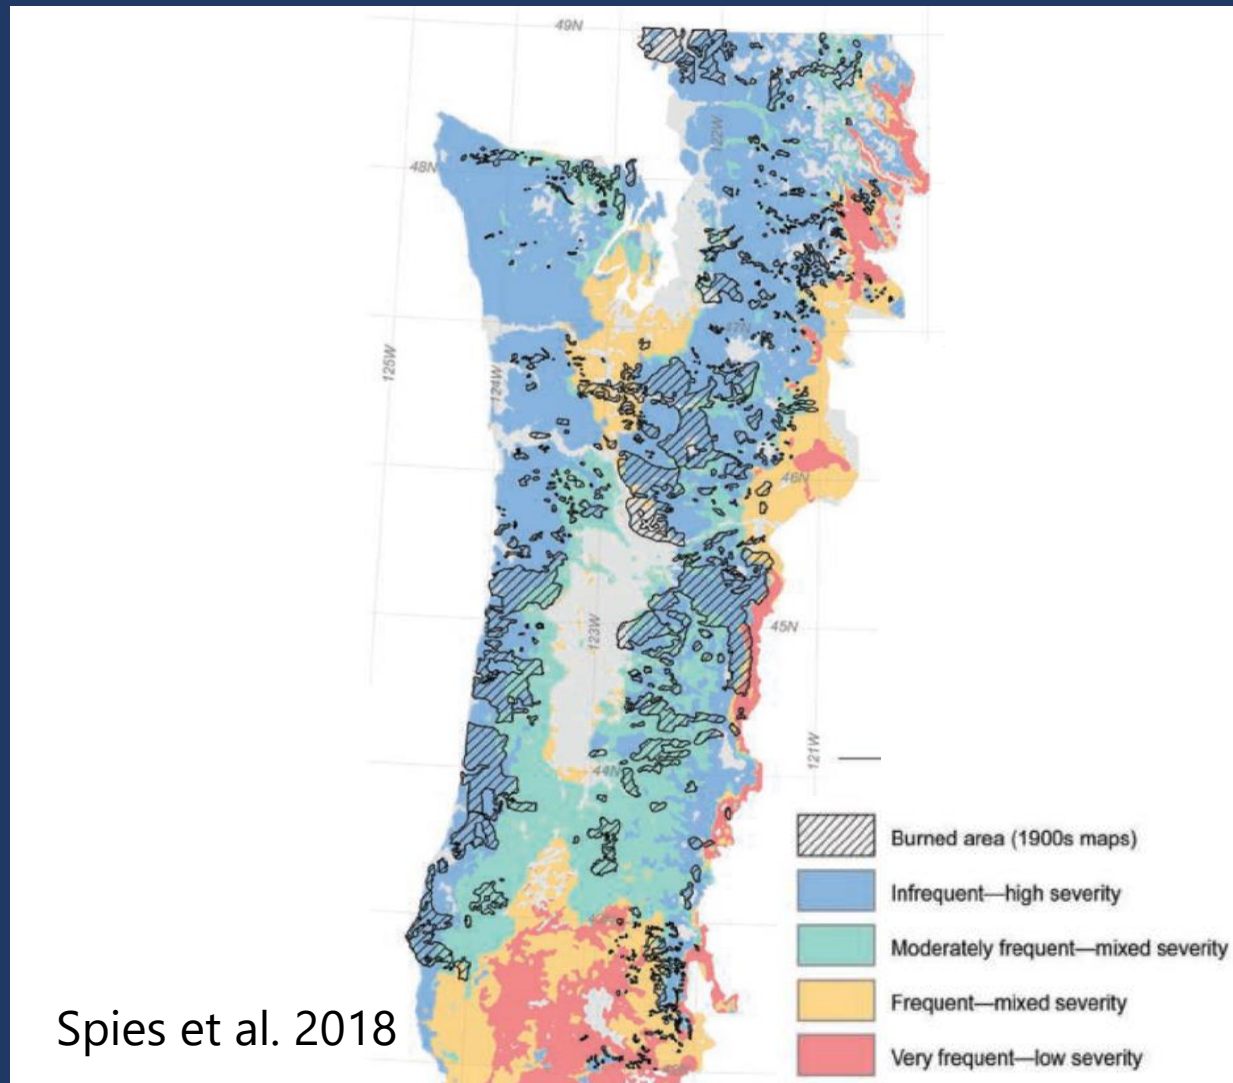

# Infrequent, High Severity

- Long time periods between stand-replacing fires
- Evidence for pre-settlement ecological role
- Primarily in wet or cool forest types

Illustration by Bob Van Pelt

# Eagle Creek Fire

# Eagle Creek Fire

# Current Fire Severity

Oregon Western Cascades

# Future Fire Activity

Study	Geographic Extent	Projected Change from Current	Variable
Stavros et al. 2014	OR, WA, N. CA	+	Large fire occurrence
McKenzie et al. 2004	OR, WA, N. CA	+	Area burned
Littell et al. 2010	WA	+ 200 to 300%	Area burned
Turner et al. 2015	Willamette Valley – OR	+300 to 900%	Area burned
Krawchuck et al. 2009	Global	+	Fire probability
Fried et al. 2004	N. CA	-8%	Area burned
Barr et al. 2010	Klamath Basin - OR and N. CA	+11 to 22%	Area burned
Liu et al. 2012	continental US	no	Fire potential <sup>2</sup>
Westerling et al. 2011	N. CA	+100%	Area burned
Rogers et al. 2011	OR, WA	+76 to 310%/ +29 to 40%	Area burned/ Severity
Sheehan et al. 2015	OR, WA	-82% to 14%	Mean Fire Interval

Mote et al. 2014

# Things To Consider

- Patch Size
- Seasonality
- Productivity
- Post-fire climate
- Invasive species
- State changes

# Pre-fire Management Options

Pre-fire management options	<i>Low Severity Regimes</i>	<i>Mixed Severity Regimes</i>	<i>High Severity Regimes</i>
Basic stand-level fuel reduction (thinning, surface fuels, ladder fuels)	✓	?	✗
Promote species and structural diversity within and across stands, include hardwoods	✓	✓	?
Reduce other ecosystem stressors (invasives, fragmentation)	✓	✓	✓
Limit human ignitions	✓	✓	✓
Aggressive wildfire detection	✓	✓	✓
Develop post-fire response strategies	✓	✓	✓

# Post-fire Management Options

<b>Pre-fire management options</b>	<b><i>Low Severity Regimes</i></b>	<b><i>Mixed Severity Regimes</i></b>	<b><i>High Severity Regimes</i></b>
<b>Assess fire impacts relative to management objectives (can be + or - )</b>	✓	✓	✓
<b>Leverage natural regeneration - inexpensive, diverse, can't replant everywhere</b>	✓	✓	✓
<b>Planting: promote species and structural diversity within and across stands, consider hardwoods</b>	✓	✓	✓
<b>Coordinate post-fire activities with adjacent landowners</b>	✓	✓	✓
<b>Use events as learning opportunities (research, monitoring, trials, adaptive mgt.)</b>	✓	✓	✓
